

Vulnerability Scan Report

Scanner Nessus | Scan SCAN-2026-4200 | Scope: Production payments and identity tier. This report summarizes detected vulnerabilities across the in-scope assets; it is a scan summary, not a single-CVE advisory or a manual penetration test.

SCAN ID	SCAN DATE
SCAN-2026-4200	2026-08-04
SCANNER	AUTHENTICATED
Nessus	No
ASSETS IN SCOPE	HIGHEST CVSS
18	9.8

SEVERITY SUMMARY

Severity	Count	SLA (days)	Breaching SLA
Critical	6	7	4
High	24	30	15
Medium	70	90	17
Low	105	180	0

TOP FINDINGS

CVE	Asset	Category	CVSS	Status
CVE-2026-31847	core-payments-api	Remote Code Execution	9.8	Open
CVE-2026-10022	sso-broker	Authentication Bypass	9.1	In Remediation
CVE-2025-48291	reporting-warehouse	SQL Injection	8.6	Open
CVE-2026-20415	edge-waf-gateway	Denial of Service	7.5	Open

Vulnerability Scan Report

METHODOLOGY AND COVERAGE

The scan enumerated network services, performed authenticated checks where credentials were provided, and correlated detected software versions against known-vulnerability data. Findings are de-duplicated per asset and CVE. Counts reflect the state at scan time and supersede the prior weekly report.

REMEDIATION GUIDANCE

Prioritize the critical remote-code-execution and authentication-bypass findings on production payments and identity assets. Apply vendor patches referenced in the per-CVE advisories, restart affected services, and re-scan to confirm closure. Track exceptions as accepted risk with an owner and review date.
